MemKeys — final mark REV3: “M3 gradient @ + keyhole”

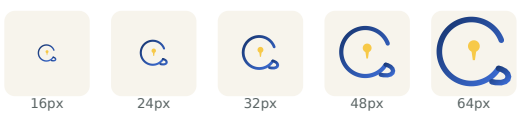

ISI-5828 · Henrik-approved 2026-10-14 (commit 6ab8e0d) · an @ re-read as memory addressing; the inner glyph is a keyhole — @attribute is the path to a fact · wordmark lockups pair this mark (name locked: MemKeys)

cobalt #17356F azure #3E6FD9 yellow #F7C948 mono #0B1F3A reverse #7FA4F5→#A9C4FF dark #0B1830

VARIANTS

FAVICON LADDER (light)

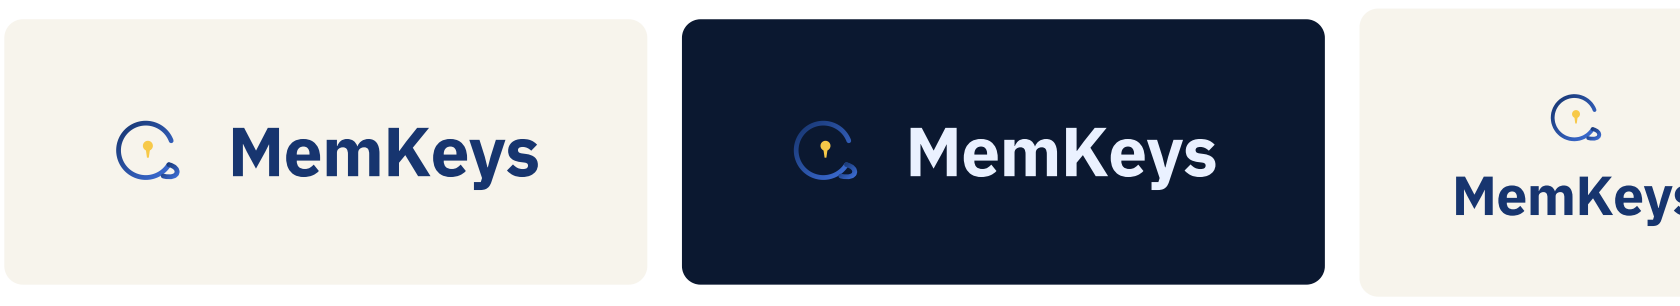

FAVICON LADDER (dark)

GEOMETRY (approved — exported unmodified)

Ring r24 · stroke 4.2 · 308° sweep, mouth open lower-right · @ tail curls out-under-back · keyhole = circle r4.4 + **narrowing** shaft (true keyhole silhouette, not the rev2 widening trapezoid) · 135° gradient #17356F→#3E6FD9 · viewBox 64 · favicon floor 16px (below 16px drop the tail, keep ring + keyhole) · keyhole accent is the only yellow in the system.

LOCKUPS (IBM Plex Sans Bold 700, outlined — re-cut with REV3)
